

# **build night 5**

2022-03-07

# agenda

- new dataset
- updates on GPT-3 refining?
- updates on research replication?
- reaching out to OpenAI

# Mate1.com breach is difficult to track down

- We got a hold of a version of the breach, but it just had emails and passwords
- Some dude at DHA said he had the dataset, but it was also just emails and passwords
- Unfortunately we cannot break ethical guidelines and spend money on this hacking forum (no matter how tempting)

# new dataset

- Includes
  - passwords
  - email addresses
  - usernames
  - phone numbers
  - physical addresses
  - phone numbers
  - **security questions and answers**
  - **website activity**
- Not as freeform as Mate1 but still has potential
